Art Unit: 2816

1. Applicant's RCE and preliminary amendments to the claims filed on 3/20/06 have been received and entered in the case.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 5 is rejected under 35 U.S.C. 102(b) as being anticipated by Wang.

Note fig.4 of Wang, where the recited means for detecting changes in the voltage from a supply voltage source reads on the current mirror formed by transistors P1 and P2; the recited compensation signal is the voltage Vbias at the drain terminal of transistor P2; and the recited compensation current is the current flowing at the drain terminal of transistor P3 (which varies according to the compensation signal at the common gate terminals of transistors N6 and N7). The recited "current mirror" in claim 5 reads on the transistors P3 and P4.

3. Claims 1-4, 8 and 13-17 are allowed.

Art Unit: 2816

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Each of the remaining references cited on the attached PTO 892 form is also seen to anticipate independent claim 5.
